

Dear Sir or Madam,

I am a very hard-working, very talented computer programmer, who can meet the needs of your company in terms of developing any software solutions you need built. I have a mathematics degree, a little bit of professional software engineering experience, C++/Python/PHP/JavaScript, a substantial portfolio of recent programming projects, and a very good understanding of theoretical computer science and algorithms.

Because I was out of work for over ten years due to a health issue, I am currently in a position where I am turning my free time into new computer programming skills—my aspiration is, to learn one new skill per week from internet tutorials, and add more and more items to my portfolio until I am finally hired for a job as a software developer. I am determined to succeed in my software job search. I am an excellent, quick self-educator, and would be happy to learn any new programming skills your company wants me to learn once I'm employed.

I have excelled in math and programming since childhood. In college, I was interested in math research and game development, and took 6 computer science classes, in addition to completing the math major.

Please don't hesitate to email me (I'm not always by my phone unfortunately) to set up a phone interview! I am eager to start work in software again soon, and I hope that your company will take an interest in my capabilities and my career.

Thanks!!

Best regards,

Philip White

EDUCATION

University of Mary Washington

Bachelor of Science in Mathematics, 6 Courses in CS

Fredericksburg, VA

Aug. 2004 – Dec. 2008

EXPERIENCE

Mathematics Tutor

Study Smart Tutors

June 2026 – Present

Houston, TX

Medical and Family Leave

May. 2011 – Jun. 2026

Richmond, VA

Software Developer

Dynamics Research Corporation

Jan. 2011 – Apr. 2011

Columbia, MD

- Developed solutions in Adobe Flash for DRC to put to use while working with a government client.

Software Developer

TexelTek

Jun. 2010 – Aug. 2010

Columbia, MD

- Presented highly innovative guidance/insights/ideas on government contracts to colleagues.
- Complied with NDA-based requirements to protect secret information.

Risk Analyst

ABSG Consulting

Feb. 2009 – Oct. 2009

Arlington, VA

PROJECTS

Interactive Chess Bot | *Python*

2026

- Used advanced Python object-oriented concepts, including multiple inheritance, to rapidly build a chess bot that can analyze all of the legal moves in any chess position and look one move deep to analyze immediate chess material consequences of any move
- Enabled human-to-human play in the chess game in one version
- Proved capabilities as a backend developer, manipulating complex software mechanics and requirements to build high-quality software
- Experimented with Claude Code, an AI, to compile the Python source code to C++

Inventory Management Software | *Python*

2026

- Demonstrated high capabilities at enterprise software by developing a complicated menus-based tree structure program for creating and assigning complex and interactive “item types” in a store
- Leveraged advanced understandings of data structures such as k-ary trees (with finite natural number k) to develop sophisticated and non-trivial capabilities for managing personnel and inventory at a store

Playing Cards Fight game | *C++*

2026

- Creatively designed a totally new computer game using playing cards as pieces that are moved around
- Learned a new skill—SFML, the graphics library—while completing this project
- Proved skill with: C++, Dijkstra’s algorithm, parallel processing, SFML, AI, debugging, and data structures

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, PHP/MySQL, HTML/CSS

Developer Tools: Git, Claude Code

Libraries: pandas, NumPy, scikit-learn, SFML

Other: Math, Statistics, Theoretical Computer Science, Solid Interpersonal Skills, Economics, Education/Mentoring
